DIVERSIFIED SECURITY (iA)¹

Risk: All risks

Investment Objectives

Generates regular long-term revenues as well as some capital appreciation. It focuses on reducing risk through a careful selection of different categories of fixed-income securities from the federal and provincial governments and corporations as well as Canadian and foreign equities of large capitalization companies.

Investment Strategy

The Diversified Security Fund's strategy is based on active and prudent management of the investment through careful diversification of the asset classes (equities and fixed-income securities). The Fund advisor pursues a balance between security and capital growth, and typically favours fixed-income securities. To reach the investment objectives, the portfolio manager may also use leverage, derivatives or short selling.

¹ Diversified Funds entail all risks because of the variety of securities that make up the Funds. However, the diversification of assets greatly limits the impact of such risks since these assets do not react in the same direction to financial market movements. Therefore, some securities will be negatively influenced while others will be positively influenced by particular market movements.
