Are bond rates too low?

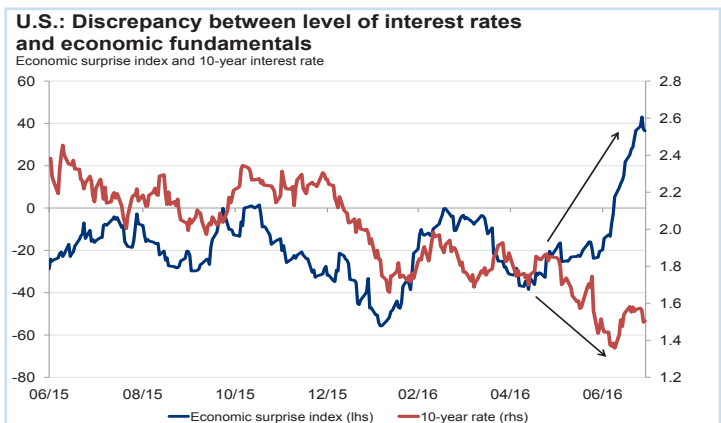

World

Pressure on bond rates has been strong since the start of the year, such that more than 70% of sovereign bonds outstanding worldwide are trading at yields below 1%. This movement can be largely attributed to the massive asset purchasing programs as well as the adoption of negative deposit rates by the European and Japanese central banks. Moreover, there are questions as to whether these extraordinary monetary measures have not reached their limits and whether the next steps should involve some kind of fiscal stimulus instead.

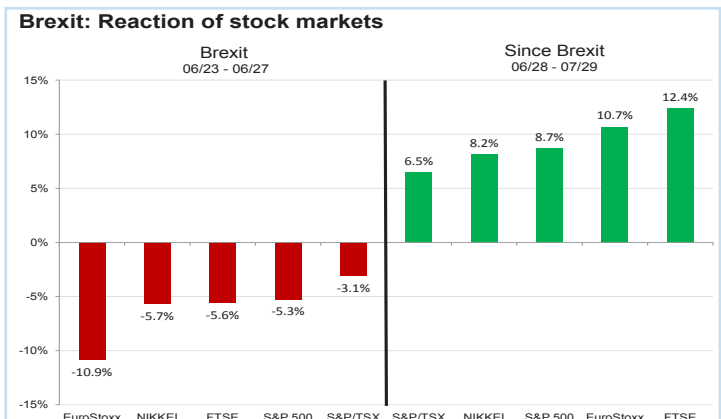

North America

In the United States, stronger-than-expected economic data published in July on the job market, consumer spending and real estate should, theoretically, have put upward pressure on interest rates in anticipation of improved growth and inflation outlooks for the country. However, the economic uncertainty in Europe and Japan is weighing on interest rates worldwide, and the North American markets are no exception.

Financial markets

Since their strong reaction to the Brexit surprise on June 24, world stock markets have rebounded, to the extent that the majority of indices posted higher levels at the end of July than before the referendum. Investors saw this period as an investment opportunity, betting on the willingness of central banks to intervene if needed and anticipating that the short-term effects of this popular decision on the world economic and financial front would be contained.

Composite indexes (portfolios)							

Each portfolio index is composed of a set of benchmark sub-indexes, listed above. These sub-indexes are linked to the portfolios' underlying funds. The weighting used is equal to the asset allocation of the portfolios' underlying funds. The asset allocation varies periodically. The current allocation appears on the *Composition of the ATTITUDE portfolios (in %)* page of the *Quarterly Update* publication.

¹ Rates of return for the period are non-annualized.

² Please refer to the Legal Notices on page 6 for more information about these indexes.

Some portfolio returns are simulated as if they were in effect during the periods shown above.

The above returns are gross returns and do not take into account management and administration fees. Past performance is not a guarantee of future returns.

Economic and Financial Statistics as at July 31, 2016
